Substance Use Disorder Treatment

*DEDICATED TO THE COMMUNITY...
FOCUSED ON THE INDIVIDUAL*

FMRS Health Systems, Inc.

FMRS has offices in Raleigh County, Fayette County, Summers County and Monroe County. Specialized programs are offered to meet the needs of children and adults experiencing emotional, behavioral, developmental or substance abuse problems. Our goal is to assist people in identifying and addressing problems early in an effort to prevent more serious difficulties from occurring. Over the years, the manner in which the services are provided has changed to mirror advances in the field, but the mission remains the same.

FMRS Health Systems, Inc. operates its programs and services without regard to race, color, national origin, gender, disability, religion or sexual orientation in accordance with Title VI of the 1964 Civil Rights Act and the Americans with Disabilities Act of 1990 (ADA).

FMRS has a continuum of care dedicated to the care of those with substance use disorders (SUD); ranging from High-Intensity Residential (ASAM Level of Care 3.5) to Outpatient SUD treatment (ASAM Level of Care 1).

FMRS has the unique advantage of being able to offer medication-assisted treatment through any level of care offered by our facility.

***FMRS HAS A
CONTINUUM OF CARE THAT
WILL
MEET THE NEEDS
FOR MOST PEOPLE IN THE
COMMUNITY.***

Detoxification

Detoxification is often the first step to addressing alcohol or substance use. The Crisis Stabilization program offers opioid, alcohol, and benzodiazepine detoxification to those who are actively withdrawing from drugs or alcohol and demonstrate commitment to long-term drug or alcohol treatment upon discharge.

Residential Programs

FMRS has three separate residential programs to provide services for individuals who meet the requirements for the ASAM 3.5 Level of Care. There are programs for men, women, and for pregnant or post partum women (and their child, up to 12 months), and each program is designed to meet the needs of the specific population that it serves.

The program provides a structured environment, individual and group counseling services daily, and assistance with building a substance-free lifestyle. The staff is highly qualified and the program includes a complete assessment and treatment for any other physical or mental health disorders. While the programming typically lasts 90 days, it is possible for the time to be extended, if it is determined appropriate.

Intensive Outpatient (IOP)

Intensive outpatient treatment (ASAM 2.1 Level of Care) is a good option for those whose substance use is beginning to interfere with some aspects of their life, such as their job, family or financial situation, but who feel they live in a supportive environment. Therapy will be provided at a level comparable to the residential programs, but the client returns to their residence at the end of the day. This allows you to remain at home, yet get a more intense treatment experience than just attending individual therapy or support groups

Outpatient

Outpatient services (ASAM 1 Level of Care) are available to individuals who are able to access appropriate supports in their community, and may be working or have family obligations. Therapy services are provided at a level which is appropriate for the individual., but typically are weekly and include a combination of group and individual therapy sessions.

Medication-Assisted Treatment

Medication Assisted Treatment (MAT) Services include the use of medications, such as Suboxone, Vivitrol, or Naltrexone in addition to counseling to treat severe opioid use problems. MAT may be offered as a treatment option within any of the FMRS substance use treatment programs. MAT would include a minimum of weekly group counseling, monthly individual counseling and all participants are seen by the physician weekly. Regular urine drug screens are completed through an on-site laboratory. An initial evaluation will determine if MAT is an appropriate option for each referral.
